Objective:

- To understand the basic structure and properties of cartilage.
- To classify cartilage into hyaline, elastic, and fibrocartilage.
- To learn the locations and functions of different types of cartilage.
- To correlate cartilage anatomy with clinical conditions such as degeneration and growth disorders.

Activity Details:

Students were explained in detail about cartilage and its types, including hyaline cartilage, elastic cartilage, and fibrocartilage, with emphasis on their structure, location, and functional significance. The session was conducted as an expert lecture by an Anatomy Professor, who used diagrams and examples for better understanding. Applied aspects such as degenerative changes, calcification of cartilage, and its role in joint disorders and growth were discussed. A question-answer session was conducted, and students actively participated and answered satisfactorily.

Glimpses of activity:

Outcome:

- Students gained clear understanding of the classification and characteristics of cartilage.
- They were able to differentiate between various types of cartilage based on structure and function.
- Students understood the clinical relevance of cartilage in orthopaedic and developmental conditions.
- The session strengthened their foundational anatomical concepts.
